DETAILED ACTION

Status of the Claims:

Claims 1 and 15-23 are currently pending.

Restriction/Election

1. This application contains claims directed to the following independent and/or patentably distinct species inventions: MOLECULAR COMPOSITE COMPOUNDS comprising: ctive site containing "core molecule(s)" conjugated to "electromagnetically labile residue(s) wherein:
 - i. the **core molecules** can be enzymes, DNA/RNA, receptors, enzymes, substrates, therapeutic agents, hormones, toxins, antigens,conjugates etc. and
 - ii. the "electromagnetically labile residue(s)" are drawn to different phenyl substituted compounds (e.g. see claims 15-18.

The selection of a single core molecule with indicated attachment sites of labile residue(s) will result in:

- A. independent and/or patentably distinct molecular composite compounds. For example, a protein core is classifiable in class 530 and a DNA core is classifiable in class 536 ; and /or.
- B. different molecular composite compounds requiring different and separately burdensome manual/computer structure and bibliographic searches in patent and literature areas; and/or
- c. result in different molecular composite compounds which would not be expected to render each other anticipated and/or prima facie obvious.

Art Unit: 1639

Accordingly, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species invention (e.g. **A SINGLE MOLECULAR COMPOSITE COMPOUND REPRESENTED BY STRUCTURE**) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is properly generic (e.g. Claim 1 is an improper Markush claim lacking constant core structure necessary for a single utility).

Applicant is advised that a reply to this requirement must include an identification of the species invention that is elected consonant with this requirement, and a **listing of all claims readable thereon**, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

FAILURE TO ELECT A SINGLE SPECIFIC COMPOUND AND ITS CORRESPONDING STRUCTURE WILL BE DEEMED NON-RESPONSIVE.

Upon the allowance of a proper generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1639

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
